INTRODUCTION

The project has been completed as a part of the Digital Literacy course and is intended to help learners acquire essential skills to effectively function in this digital world.

As a Student Digital Ambassador, this project primarily focused on raising awareness about digital literacy, developing a professional online presence, and learning to effectively utilize digital platforms in a safe and responsible manner. The activities included designing an infographic, developing professional profiles on various digital platforms, learning basic coding and collaboration tools, learning to effectively communicate via email, and learning about various cybercrime situations.

I gained practical experience using various digital tools and improved my understanding of online communication, security, and professional online presence in a digital world. Overall, this project has not only improved my digital literacy skills but has also prepared me for various academic and professional opportunities.

TASK 1 - INFOGRAPHIC

For this task, I designed a digital literacy awareness infographic using Canva. The infographic was created as a single-page visual guide to present the concept of digital literacy in a simple and engaging way. It included important topics such as safe internet usage, maintaining a professional online identity, and effectively using digital tools for educational purposes. The main objective was to make the information clear, attractive, and easy for students to understand.

While designing, I used clean layouts, suitable icons, and balanced color combinations to emphasize key points. One of the main challenges I faced was choosing the most relevant content and presenting it in a limited space without making the design too crowded. Overcoming this challenge helped me enhance my ability to present information in a clear and concise manner.

Overall, I enjoyed this activity as it allowed me to combine creativity with logical organization. It also helped me understand the importance of visual communication in spreading awareness about digital literacy.

TASK 2 - DIGITAL PORTFOLIO

In this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle to build a strong professional presence online. On GitHub, I focused on showcasing my coding work and also added a profile README to highlight my academic background, skills, and areas of interest. LinkedIn was used to present my educational details and start connecting with a professional network. Kaggle helped me explore data science concepts and work with different datasets.

Each platform has its own importance. GitHub is mainly used for project development and managing code, LinkedIn is useful for networking and exploring career opportunities, and Kaggle supports learning and practicing data science and analytics.

Looking ahead, I plan to regularly use GitHub to upload and improve my projects, LinkedIn to connect with industry professionals and search for internship opportunities, and Kaggle to strengthen my analytical thinking and problem-solving skills. Overall, this task made me realize the importance of maintaining a clear and professional digital identity.

TASK 3 - DIGITAL PLATFORMS

In this task, I explored both coding practice platforms and collaboration tools to improve my digital skills. For coding practice, I used HackerRank and solved a beginner-level problem. This gave me a basic understanding of how such platforms work and how they help in developing problem-solving abilities. These platforms provide structured challenges that are useful for building programming logic and preparing for technical interviews.

I also learned how these tools are valuable in an academic environment. Coding platforms help in improving programming knowledge, while collaboration tools like Google Forms are useful for conducting surveys, quizzes, and group activities. This task helped me become more familiar with digital tools that support both learning and teamwork.

For the collaboration part, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions, including multiple-choice and short-answer types. I connected the form to a Google Sheet to automatically collect responses. This activity helped me understand how digital tools can be used effectively for collecting and analyzing data.

TASK 4 - EMAIL ETIQUETTE

In this task, I practiced writing professional emails and understood the importance of clear and effective communication in a digital environment. I wrote two emails—one to request an extension for an assignment from a professor and another to express my interest in a summer internship opportunity. Both emails were written in a formal style, with clear subject lines, polite language, and proper structure.

I also learned that one of the common problems in digital communication is the use of informal language or unclear messages, which can lead to confusion or misunderstanding. For instance, an email without a proper subject line or with an unprofessional tone may be ignored or misunderstood.

Overall, this task helped me improve my email writing skills and understand the importance of maintaining clarity, professionalism, and proper etiquette in both academic and professional communication.

TASK 5 - CYBERCRIME AWARENESS

In this task, I studied UPI-based payment fraud, which is one of the most common types of cybercrime in India. I learned how scammers trick people into approving payments by sending fake requests, links, or messages that appear genuine. One thing that surprised me was how easily users can be fooled into sharing sensitive information due to a lack of awareness.

This activity made me more careful about handling online transactions and protecting my digital information. I realized the importance of being alert while making payments or responding to unknown requests. One important habit I plan to follow is always verifying payment requests before accepting them and never sharing my UPI PIN or personal details with anyone.

Overall, this task helped me understand different cyber threats and the importance of taking preventive measures. It also encouraged me to practice safe and responsible behavior while using digital platforms.

CONCLUSION

This project gave me a clear understanding of digital literacy and how it is applied in real-life situations. Through the different activities, I was able to develop skills in visual communication, building a professional online presence, practicing coding, using collaboration tools, and understanding online safety.

The project also highlighted the importance of maintaining a responsible digital identity and communicating effectively in professional settings. At the same time, it made me aware of cyber risks and the need to stay cautious while using digital platforms.

Overall, this project has improved my confidence in using various digital tools and has prepared me better for future academic work as well as professional opportunities.
